CYBER
SECURITY
SOLUTIONS**

THE HOME TRUTH ABOUT CYBER SECURITY

Picture this, you're getting ready to leave the house ready for your holiday and you check that all the doors and windows are locked, and perhaps even set a burglar alarm. Why? Well, that's obvious. Our homes contain personal and costly belongings that we don't want other people to get access to, therefore we implement security measures to keep people out.

The same applies with a security solution. If protecting your home is such a natural and common concept – then why wouldn't you protect your business too?

HOW DOES RANSOMWARE ENTER MOST BUSINESSES?

Bitdefender®

STAY AHEAD OF CYBER-ATTACKS WITH ADAPTIVE SECURITY

CONSISTENTLY SUPERIOR PROTECTION

Encompassing more than just anti-virus, Bitdefender brings a host of features that protect your device. Between anti-malware, anti-phishing and dual-layered firewalls, Bitdefender ensures your device is secure by detecting, anticipating and blocking all known and unknown attacks from its centralised cloud console.

Under its Advanced Threat Control suite, Bitdefender extracts known patterns of malware and viruses and looks for similar patterns in new, emerging threats. By watching over all active processes, it marks any malicious behaviour against a score. Should the active threat receive a score that passes the suspicious threshold, Bitdefender will remove and quarantine the malicious code.

ADVANCED EMAIL SECURITY FOR MICROSOFT 365

BLOCK MICROSOFT 365 MAILBOX ATTACKS OTHER SOLUTIONS MIGHT MISS

Exchange Online Protection (EOP) and Advanced Threat Protection (ATP) for Microsoft 365 are reputable forms of protection against mass spam attacks, relying on traditional signature and reputation-based security tools. But they cannot identify new threats such as spear phishing attempts or Business Email Compromise (BEC) attacks due to their sophisticated nature.

Advanced Email Security for Microsoft 365 by Vade Secure bolts itself onto EOP as a complementary layer of security. It enhances protection by using machine learning to predict patterns for new and emerging threats, while building technical profiles for individuals you regularly communicate with, identifying malicious imposters to circumvent spear phishing attacks. With Vade, you can relax knowing you're covered.

ENTERPRISE MOBILITY AND SECURITY

Designed as the ultimate security package for businesses, EM+S includes Intune, Azure Active Directory and Azure Rights Management. It's the 3-in-1 security solution that helps protect company data, employee identities and company-owned devices without compromising on productivity.

Controlling company data on employee devices is becoming increasingly harder in today's mobile-first world. And with new data protection regulations in focus with GDPR, securing sensitive data is critical. By using EM+S, your journey to GDPR compliance is automatically supported by Microsoft with verified data protection third-party tools.
